- Harvard
- Indiana University
- Iowa State
- Lafayette College
- Michigan State
- MIT
- NYU
- Ohio State
- Oregon State
- Penn State
- Purdue
- Stanford University
- UC Berkeley
- Washington University
- Yale
- *and many more*

Building Online Higher Ed Communities with Drupal

Universities and colleges have begun to embrace Drupal on a wide scale. Drupal's open source license model and modular architecture delivers a flexible, scalable platform for a diverse range of education websites. It extends control directly to content owners, empowering end users and simplifying operations for IT.

Hundreds of colleges and universities around the globe are currently operating Drupal sites. Many institutions rely on Acquia's products, services and commercial support to simplify the operation of their Drupal websites.

Why Is Drupal Attractive to Universities?

Large, Global Community

Drupal boasts a thriving developer community with thousands of active contributors focused on enhancing the quality of the platform. There are thousands of available custom modules, including more than 4,000 modules for Drupal 6.x.

Customizable, Open Architecture

Drupal is an open, modular web content management system (CMS) written in PHP. New capabilities can be added by simply installing a module. Built-in social publishing features allow institutions to create first class websites that unite content and community.

Support for Multisite Deployments

Drupal is uniquely able to support many different websites from a single installation, with the ability to deploy new sites in minutes from standard site templates. As a result, Drupal enables decentralized site management with centralized IT infrastructure oversight.
