As online activity increases, digital experiences must always be available and responsive to meet customer demand. Application availability is dependent on maintaining security and performance together at the edge. Further, as security threats and application delivery expectations evolve, leveraging all of the data in the network is critical.

Acquia Edge makes it possible to deliver fast, secure, and always available digital experiences.

Increase Revenue
Bring content closer to users wherever they are in the world along fastest path to decrease load time

Reduce Risk
Integrated defense against DDoS or abusive traffic to reduce application load while keeping users and their data safe

Build Trust
Guaranteed 24/7 application protection to avoid downtime and ensure business continuity.

BENEFITS FOR YOUR BUSINESS

- Mitigate any risk to your application in under 10 seconds

- Deliver content within 100 milliseconds to 99% of the world

- Leverage hundreds of global datacenter locations

- Implement specialized Drupal-specific WAF rules

- Eliminate lengthy installs and costly support and maintenance with 100% cloud-based solution

EDGE CDN

Acquia Edge CDN provides a highly customizable, global content delivery network to accelerate application delivery, mobile experiences, and ensure availability by avoiding bottlenecks and overloaded servers. With hundreds of PoPs worldwide, you can reach up to 95% of the world's internet-connected population faster than the blink of an eye to meet customers wherever they choose to engage with your brand's content.

CDN
Move content physically closer to visitors with a network of global PoPs..

SSL
Modern SSL isn't just for security—it can actually improve the performance of your website.

Website Optimization
Automatically enable best practices in website delivery.

Anycast DNS
Fastest managed DNS providers in the world to optimize delivery.

EDGE SECURITY

Acquia Edge Security ensures you have the best protection from day one by delivering enterprise-grade security, including a Web Application Firewall (WAF) and DDoS mitigation, to secure applications from malicious attacks and protect digital experiences. Along with access to hundreds of standard rulesets to block vulnerabilities and avoid reactionary disaster cleanup, you can eliminate the risk of digital experience security breaches to prevent negative brand impact and increase brand value.

DDoS Protection
Advanced Layer 3, 4 and 7 DDoS protection to mitigate threats and protect your applications from attacks.

Web Application and IP Firewall
Our WAF contains hundreds of standard rule sets to block vulnerabilities, while our IP Firewall allows you to block or whitelist specific IPs, ASNs, or even entire countries.

EDGE BOT MANAGER

An add on that layers onto Edge Security, enabling you to gain heightened visibility and control of bot traffic to your digital experiences.

- Leverage a directory of more than 1,400 known bots in 17 categories.
- Stay up to date with automatic updates of the characteristics and behaviors used to identify bots.
- Utilize real-time and historical reporting on bot traffic.
- Detect traffic from unknown bots.
- Maintain a competitive advantage and retain control over customer relationships by preventing price and content scraping.
- Reduce financial risk by protecting against forms of web fraud.
- Lower costs by slowing the growth of your web infrastructure and reducing the IT overhead required to manage bots yourself.
- Improve user experience by reducing the impact of bots on servers during business hours

THE LIFEBLOOD OF A DIGITAL EXPERIENCE IS CONTENT
