

Acquia Cloud: Cloud Service Management

Scale when you need it

Traffic to your digital applications is not predictable. Whether it's seasonal business, an event, or simply the growth of your organization, your traffic will grow and spike in unpredictable ways. Acquia Cloud Service Management enables your team to take control of scale to respond to changes in traffic fast from the Acquia Cloud console. Applications owners benefit from cost controls by managing capacity utilization.

Acquia Cloud Service Management includes all of the infrastructure needed to support Drupal digital applications. Each instance includes both staging and production environments rated for a certain level of traffic that requires Drupal processing (based on a typical Drupal application). Acquia Cloud continuous delivery environments (CDEs) provide development support for applications. As your application use grows, or if an unexpected spike in traffic occurs, you can easily increase your application's capacity to support Drupal processing from the Acquia Cloud console.

Acquia Cloud Service Management Features

	Cloud Service Management (Small)	Cloud Service Management (Medium)	Cloud Service Management (Large)
Available as base infrastructure	✓	✓	
Maximum applications supported	5	10	10
Capacity (peak content requests / day)	18,000	40,000	60,000
Production/Staging Environment			
File storage	Up to 120GB	Up to 120GB	Up to 120GB
Database storage	Up to 100GB	Up to 100GB	Up to 100GB
Continuous Development Environments			
Environments available	5	10	10
Maximum sites on Drupal multi-site	Up to 3	Up to 3	Up to 3
Maximum file system storage	5 GB	5 GB	5 GB
Maximum database storage per database	1 GB	1 GB	1 GB
Memcache	64 MB	64 MB	64 MB

Multi-tier varnish, web, and database configuration	✓	✓	✓
Dedicated PHP processes	2	2	2
Drupal versions supported	D7 & D8	D7 & D8	D7 & D8
Drush support	✓	✓	✓
Drush versions	8.1.12+	8.1.12+	8.1.12+
Continuous Delivery Pipelines			
Included	✓	✓	✓
Authenticate with Github	✓	✓	✓
