Is Your Tech Stack Delivering Maximum Value?

In a world where more than six in 10 companies miss out on the significant benefits that come from integrating their applications and user experiences, it pays to know where your tech stack might be falling short.

To help you ensure your tech stack is delivering all the value it could be, we created this checklist of questions to consider.

Does your organization's current tech stack help you:

	Yes	No
Reduce costs? Have you eliminated redundant tools, streamlined workflows, and reduced dependency on multiple vendors where possible?	○	○
Optimize operational efficiency? Can your teams collaborate with minimal friction so they can get products and services to market faster?	○	○
Improve consistency? Have you streamlined to a point where processes, content, and experiences are very clear and consistent for employees and end users?	○	○
Increase agility? Are you able to easily adapt to new technologies and changing market conditions?	○	○
Strengthen security? Are you able to manage and apply security measures quickly to reduce the risk of cyberattacks and data breaches?	○	○
Simplify IT management? Have you minimized the number of systems and applications your IT staff must spend time and resources managing and maintaining?	○	○
Enhance governance? Are you meeting privacy, security, and accessibility compliance standards in the ways you're gathering and managing data and delivering digital experiences?	○	○

If you answered no to any of these questions, it may be time to optimize your tech stack.
